PROFILE

Full stack developer who spent the last three years on the reporting side of the business: client facing dashboards, business intelligence and production web apps. Ships whole products solo, schema first and interface last, and works with AI coding agents every day. Before development came teaching, remote client support and graphic design. That is where the less glamorous skills come from: plain written communication, a clean layout, and explaining what a number actually means to someone who doesn't live in a database.

EDUCATION

ST. MARY'S COLLEGE OF TAGUM, INC.
Bachelor in Computer Science

Tagum City, Philippines
Graduated 2018

PROFESSIONAL EXPERIENCE

TRADE DYNAMICS (TRADYNAMICS)
Business Analysis Developer

Manila, Philippines, Remote
Jun 2023 to Sep 2026

- Owned Amazon QuickSight dashboards for four national FMCG and pharmaceutical suppliers, and stayed the main report developer for two of them the whole three years. Their executives and upper management ran field sales off these dashboards.
- Wrote the daily MySQL stored procedures that turned Engagia sales force automation (SFA) data into QuickSight SPICE datasets. Not a small feed, either: the biggest client supplied 2,000+ retail branches nationwide and logged ₱5M+ in sales a day.
- If the field team did it, there was likely a visual for it. Sales vs target by branch, user, team and user group; out of stock, on shelf availability and share of shelf by branch, region, city and store classification; display compliance, offtake and competitor pricing; and merchandiser schedule compliance, meaning planned vs actual visits, late arrivals, unscheduled visits and which visits turned into a sale.
- Management asked for a new schedule compliance cut almost every week. Each one became a repeatable dashboard view instead of a one off.
- Checked source data before it reached a visual, so the same figure read the same way on every client dashboard.
- Walked client management through the reporting logic in plain terms, so they could act on what they were looking at.
- Helped build a prototype of an in house, AI assisted reporting product on Next.js and NestJS.
- Worked in legacy PHP and CakePHP (HMVC) codebases just as readily as in TypeScript and React.

ALL ABOUT YOU SKIN CLINIC
General Virtual Assistant

Australia, Remote
Feb 2022 to Aug 2022

- Answered client inquiries over email and social media, and booked appointments for two clinic locations.

PENCIL LEARNING TECHNOLOGIES
Graphic Artist

Singapore, Remote
Feb 2020 to Sep 2020

- Redrew book page artwork as clean vectors for an education technology company. Illustrator and Photoshop, every day.

H&M ADVERTISEMENTS
Graphic Artist

Mindanao, Philippines
Aug 2019 to Jan 2020

- Made layouts, vector art and photo edits to each client's taste for a print on demand and advertising shop.

ST. MARY'S COLLEGE OF TAGUM, INC.
College Instructor, Information Technology and Computer Science

Tagum City, Philippines
Jul 2018 to Mar 2019

- Taught Systems Database Analysis and Design, plus programming classes in HTML, CSS, JavaScript, MySQL and Java.
- Covered the multimedia side too: Photoshop, Illustrator, After Effects and Premiere.
- Graded student work for correctness and style, and broke hard technical ideas into pieces students could actually follow.

- Juggled course schedules, assessments and deadlines for several sections at once.

CASE STUDY

THEJOBSTASH, RESUME MATCHED JOB SEARCH

thejobstash.com

Own product, live and taking payments. Next.js 16, TypeScript, Tailwind CSS, Cloudflare Workers and D1, Python, n8n, PayMongo

Problem. Job boards answer a keyword, not a person. So applicants waded through hundreds of listings to find the handful they qualify for, plenty of them already closed, and none saying why a job is out of reach.

Approach. Upload a resume once. Every run scores the current job pool against it and sorts the results into strong matches, worth a look, and near misses (each with the requirement that blocked it), delivered as pages and PDFs.

Decisions.

- The first version kept job data in the cloud database. Scoring a single resume dragged all of it back through the server, blew past the host's per request CPU limit and took the site down. So the data moved onto the machine that does the scoring, reached over a secure tunnel, while accounts and payments stayed in the cloud.
- Listings get rechecked every three hours, so a closed posting never makes it into a digest.
- Credits, not a subscription. And if a run can't start, the credit goes back.

TECHNICAL SKILLS

Front End: Next.js 14 to 16 with App Router, React 18 and 19, TypeScript, JavaScript ES6+, Tailwind CSS, Framer Motion, SWR, Bootstrap, HTML5, CSS3, responsive design

Back End: NestJS, Node.js, Python, PHP, Laravel, Laravel Blade, CakePHP, Express.js, REST APIs, webhooks, Google OAuth and JWT authentication, MVC and HMVC

Data and Business Intelligence: Amazon QuickSight (SPICE), SFA data reporting, MySQL (stored procedures), PostgreSQL, Cloudflare D1, Prisma, Supabase, SQL, report logic, data validation, standardized report output

AI: Claude API (Anthropic SDK), local LLMs with Ollama, AI chat and receptionist widgets, AI coding agents and agent based workflows, prompt and context management, reviewing and testing AI generated code

Automation and Integrations: n8n workflows (schedules, webhooks, Google Sheets), Meta Graph API and a Messenger reply bot, PayMongo payments, transactional email (Brevo, Resend), web scraping in Python

Tooling and Platforms: Git, GitHub, Vercel, Vercel Blob, Cloudflare Workers (OpenNext), Cloudflare Tunnel, Docker, Figma, Asana

Design: Adobe Photoshop, Adobe Illustrator, After Effects, Premiere Pro, layout, vector artwork, photo editing, graphic design

Operations and Communication: Client communication, explaining technical results to non specialists, technical instruction and assessment, proofreading and standard operating procedure writing, inbox and scheduling management

Languages: English, professional working proficiency; Filipino, native
